

Dict.Org client

Platform: Series 60 (Symbian)

Tested on: Nokia 3650

Should also work on: Nokia 7650, Nokia 3660, Nokia 6600, Nokia N-Gage, Sendo X, Siemens SX1, Samsung SGH-D700

How to play

This is an implementation of DICT client for Series 60 platform. I implemented some basic commands and it is quite possible that some enhanced versions will be introduced somewhen in the future.

After you use "Dictionary" command from menu you move to "Dictionary screen" where you have all the fun. Now, select a "Connect" command for connection to dict server. Then simply type word you want look up and press "Find" button. Waiting message will appear, program will connect to the Internet.

Hopefully you will receive answer, which will be displayed (beautifully colored...-) on your phone. You can also set your favorite DICT server on the settings screen.

More information about DICT protocol, servers, clients and resources is available at <http://www.dict.org>

List of DICT servers available on the Internet:

Controls

You can switch between TEXT field and RESULTS box using UP and RIGHT arrows.

Support

Further information can be obtained from <http://kuca.webzdarma.cz> or through e-mail: sopta@post.cz
